Explanations of the signs from left to right

Example:

**PY35 = pigments used**

(see explanation on page 200)

### degree of lightfastness

+++ = 100 years completely lightfast under museum conditions (78 colours)

++ = 25 - 100 years lightfast under museum conditions

+ = 10 - 25 years lightfast under museum conditions (2 colours)

0 = 0 - 10 years lightfast under museum conditions

The lightfastness of all these colours has been tested in accordance with ASTM Standards D4303

**271 = colour number**

### Opacity

= semi-transparent (26 colours)

### 3 = price series

= also available in tube of 20 ml

◆ = colour with high adhesion (11 colours)

G = Granulating colours (11 colours which give a light grainy effect) are indicated with a G

**Transparency** Most Rembrandt water colour tones are very transparent because of the use of pure gum arabic and the pigments chosen. A few colours are slightly less transparent because of the specific pigment used, such as cadmium colours.

Nevertheless, since water colours are usually heavily diluted, this will be scarcely visible. These less transparent colours are marked with a .
